

What is the Online Brain Injury Screening and Support System (OBISSS)?

The OBISSS is an online screening system to determine lifetime exposure to brain injury and to identify associated challenges that may be present for youth and adults. This system utilizes the validated and reliable Ohio State University TBI-Identification Method (OSU TBI-ID).

The OBISSS is self-administered and appropriate for ages 13 and up. With the link provided below, any individual can complete the OBISSS screen on their own, or with help. The OBISSS collects additional demographic information from each individual, and the individual will be prompted to complete the Symptoms Questionnaire for Brain Injury (SQBI).

Tip sheets are delivered, responding to identified challenges, to the individual and a copy can be sent to case managers or providers. OBISSS will provide customized referral information and where to access additional resources and supports. The OBISSS helps in the following ways:

Client Support:

- Identify a likely history of brain injuries.
- Identifies individual challenges and offers personalized strategies.
- Provides practical advice on supporting individuals with brain injury.

Data:

- Shares data on brain injury trends in screening settings.
- Adds to the national understanding of brain injury history.
- Improves brain injury programs and policies.

Is the OBISSS a public platform?

Only in the sense that you can share the link with anyone you are serving. NASHIA manages the OBISSS through a secure, HIPAA-compliant data platform.

Directing clients to OBISSS:

Share the link, log in information, and your email address with the individual who is completing the screener.

Direct the individual to add your email address to the first page when prompted.

Review the emailed results.
